

BTC BINARY PREDICTION TRADING PLATFORM

1. EXECUTIVE SUMMARY

BTC Binary Prediction Trading Platform is a decentralized peer-to-peer prediction marketplace built as a Telegram Mini App.

The platform enables users to predict the direction of Bitcoin (BTCUSD Spot) candles within predefined time periods.

Users participate by selecting one of two outcomes:

- Green Candle (Bullish)
- Red Candle (Bearish)

Users stake USDT into their selected prediction side.

After candle completion, the losing side's funds are distributed to the winning side according to predefined platform rules.

Unlike traditional exchanges where users trade against the platform, this platform follows a user-versus-user prediction model.

The platform only facilitates:

- Pool creation
- Fund management
- Settlement calculations
- Referral distribution
- Reward pool distribution
- Audit tracking

The platform does not take market exposure risk.

2. PLATFORM VISION

To build the world's most transparent and decentralized Bitcoin prediction ecosystem integrated directly inside Telegram.

The goal is to create a system where:

- Every trade is transparent
- Every distribution is auditable
- Every reward is traceable
- Every user can verify platform operations

without relying on centralized manipulation.

3. PLATFORM OBJECTIVES

The platform has five primary objectives.

Objective 1

Provide simple BTC directional prediction trading.

Objective 2

Create a fair user-vs-user reward distribution system.

Objective 3

Reward community growth through a 20-level referral structure.

Objective 4

Reward active traders through lifetime reward pools.

Objective 5

Maintain complete transparency of all transactions.

4. PLATFORM ACCESS

The platform operates exclusively through Telegram Mini App.

No website version is planned for Version 1.

Users access the platform through:

Telegram → Mini App → Trading Dashboard

Benefits:

- Faster onboarding
 - Telegram identity verification
 - Referral tracking
 - Mobile-first experience
-

5. USER REGISTRATION

Registration is mandatory.

Users cannot access the platform without registration.

Registration Requirements

Each user must have:

- Telegram Account
 - Telegram ID
 - Wallet Address
 - Referral Link
-

Mandatory Referral System

The platform follows a mandatory sponsor model.

Registration without a referral link is not allowed.

Every user must enter the ecosystem through an existing participant.

User Mapping

The system stores:

Telegram ID

Wallet Address

Referral ID

Registration Date

Sponsor Chain

This information creates the permanent referral genealogy.

6. BLOCKCHAIN NETWORK

The platform uses:

USDT (BEP20)

Network:

BNB Smart Chain (BSC)

All deposits and withdrawals occur in USDT.

No other currency is supported in Version 1.

7. WALLET SYSTEM

Every user receives two internal wallets.

Deposit Wallet

Purpose:

Trading capital.

Stores:

- User deposits
- Deposit balances
- Trading funds

Can be withdrawn without charges.

Profit Wallet

Purpose:

Stores platform earnings.

Includes:

- Trading profits
- Referral commissions

Profit Wallet withdrawals incur platform charges.

8. FUND FLOW OVERVIEW

Deposit Flow:

User Wallet
→ Deposit Wallet

Trading Flow:

Deposit Wallet
+
Profit Wallet
→ Trading Pool

Winning Settlement:

Trading Pool
→ Profit Wallet

Referral Settlement:

Trading Pool
→ Referral Profit Wallets

Platform Allocation:

Trading Pool
→ Platform Wallets

9. TRADING CONCEPT

Users predict Bitcoin candle direction.

Two choices exist.

Green

or

Red

Users stake USDT on their selected side.

After candle completion:

Correct prediction wins.

Incorrect prediction loses.

The losing side's funds become reward capital.

10. TRADING POOLS

The platform supports four pool types.

Pool A

3 Minute BTC Candle

Pool B

5 Minute BTC Candle

Pool C

4 Hour BTC Candle

Pool D

1 Day BTC Candle

Each pool operates independently.

Each pool has a unique Pool ID.

Example:

POOL-3M-20260616-0001

POOL-5M-20260616-0001

POOL-4H-20260616-0001

POOL-1D-20260616-0001

Every transaction is linked to a Pool ID.

11. BTC DATA SOURCE

Trading Pair:

BTCUSD Spot

Source:

TradingView Market Feed

Settlement uses:

Opening Price

Closing Price

Only.

Wicks are ignored.

Volume is ignored.

Indicators are ignored.

12. CANDLE RESULT RULE

Green Candle:

Close Price > Open Price

Winner = Green Side

Red Candle:

Close Price < Open Price

Winner = Red Side

No Doji Handling

If market closes equal:

System automatically follows predefined fallback rule configured by admin.

13. TRADE LIMITS

Minimum Trade:

\$1

Maximum Trade:

\$1,000

Per Entry

The system rejects any amount outside this range.

14. BALANCE VALIDATION

Before accepting a trade:

System verifies:

Deposit Wallet Balance

+

Profit Wallet Balance

is greater than or equal to Trade Amount.

If insufficient:

Trade is rejected.

No balance deduction occurs.

15. MULTI WALLET PARTICIPATION

Users may use both wallets in a single trade.

Example:

Deposit Wallet = \$7

Profit Wallet = \$3

Trade = \$10

System Uses:

\$7 Deposit Wallet

\$3 Profit Wallet

Total = \$10

Both values are stored separately for future settlement.

16. TRADE POOL VISIBILITY

Every Trade pool must publicly display:

Trade Pool ID

Trade Pool Type

Entry Countdown

Lock Countdown

Total Green Volume

Total Red Volume

Green Participants Count

Red Participants Count

Total Trade Pool Volume

Trade Pool Status

This ensures full transparency.

17. PARTICIPANT VISIBILITY

Every trade pool must show:

User Address

Trade Amount

Prediction Side

Entry Time

Pool ID

This allows users to verify participation activity.

18. POOL STATES

Open

Locked

Settling

Completed

Only Open pools accept participation.

19. SETTLEMENT PRINCIPLE

The platform never creates rewards.

Rewards originate only from:

Losing Pool Capital.

This guarantees a true P2P model.

20. REWARD DISTRIBUTION MODEL

Winning Reward Distribution:

User = 70%

Referral Network = 20%

Platform = 10%

This model is applied to every winning reward calculation.

21. WINNING SIDE IDENTIFICATION

Once the BTC candle closes, the platform compares the candle Open Price and Close Price.

Green Candle Result

Condition:

Close Price > Open Price

Winner Side = Green

Loser Side = Red

Red Candle Result

Condition:

Close Price < Open Price

Winner Side = Red

Loser Side = Green

After the winner is identified, the settlement process begins automatically.

22. LOSING POOL FUND COLLECTION

The entire losing pool amount becomes the reward source for winning users.

Example:

Green Pool

Total Stake = \$1,000

Red Pool

Total Stake = \$100

BTC Result = Red

Winner Pool = Red

Loser Pool = Green

Reward Source = \$1,000

The winning side receives distributions from this \$1,000 reward source.

23. USER WINNING SHARE CALCULATION

Every winning user receives a percentage of the losing pool based on their contribution inside the winning pool.

Formula

User Share %

=

User Stake * Total Winning Pool Stake

Example

Winning Pool Total

\$100

User Stake

\$10

Share

$10 \div 100$

$= 10\%$

24. GROSS WINNING REWARD

The user's share percentage is applied to the losing pool.

Formula

Gross Winning Reward

=

Losing Pool Amount $\times$ User Share %

Example

Losing Pool

\$1,000

User Share

10%

Gross Reward

\$100

This \$100 is the reward generated by the user.

25. WINNING REWARD DISTRIBUTION

Every gross reward is distributed using the platform settlement model.

Distribution Structure

Receiver	Percentage
User Profit Wallet	70%
Referral Network	20%
Platform Profit	10%

Example

Gross Reward

\$100

Distribution:

User Profit Wallet

\$70

Referral Pool

\$20

Platform Share

\$10

26. BASE CAPITAL RETURN

Original trading capital is never treated as profit.

When a trade wins, the original capital must be returned.

Example

Trade Amount

\$10

Deposit Wallet Contribution

\$4

Profit Wallet Contribution

\$6

Reward Generated

\$100

Settlement:

Deposit Wallet Return = \$4

Profit Wallet Return = \$6

Reward Credit = \$70

Final User Credit

Deposit Wallet

\$4

Profit Wallet

\$76

(\$6 Capital Return + \$70 Reward)

27. LOSING TRADE SETTLEMENT

If a user loses:

Deposit Wallet Capital = Lost

Profit Wallet Capital = Lost

Reward = \$0

Capital Return = \$0

The losing capital becomes part of the reward source for winners.

28. REFERRAL COMMISSION SYSTEM

The platform uses a mandatory 20-Level referral structure.

Every user must register through a referral link.

The referral hierarchy becomes permanent after registration.

It cannot be modified later.

29. REFERRAL DISTRIBUTION STRUCTURE

20% of every winning reward is allocated to referral commissions.

The allocation is divided equally among 20 levels.

Referral Allocation

Level	Allocation
Level 1	1%

Level	Allocation
Level 2	1%
.....	
Level 20	1%
Total	
20%	

30. REFERRAL LEVEL DEFINITIONS

Level 1

Direct Sponsor

Level 2

Sponsor of Level 1

Level 3

Sponsor of Level 2

...

Level 20

20th Upline Sponsor

31. REFERRAL QUALIFICATION MODEL

Referral commissions are not automatically earned.

Each level must qualify.

Qualification is based on:

Self-Trading Volume + Direct Referral Trading Volume

Qualification Formula

Required Volume

=

Referral Level $\times$ \$100

Examples

Level 1

Required Volume

\$100

Level 5

Required Volume

\$500

Level 10

Required Volume

\$1,000

Level 20

Required Volume

\$2,000

32. REFERRAL DISTRIBUTION EXAMPLE

Winning Reward

\$100

Referral Allocation

\$20

Each Level Receives

\$1

Assume:

Level 1 Qualified

Level 2 Qualified

Level 3 Qualified

Level 4 Qualified

Level 5 Qualified

Level 6–20 Not Qualified

Distribution

Level 1 = \$1

Level 2 = \$1

Level 3 = \$1

Level 4 = \$1

Level 5 = \$1

Total Paid = \$5

Remaining = \$15

33. UNQUALIFIED REFERRAL HANDLING

Undistributed commissions are never:

Held

Burned

Redistributed

Instead:

Transferred to Platform Profit Wallet

Example

Referral Pool

\$20

Qualified Levels

5

Paid

\$5

Unqualified

\$15

Platform Receives

\$15

34. PLATFORM PROFIT MODEL

Platform receives:

Fixed 10% Settlement Share

PLUS

All Unqualified Referral Commissions

Example

Winning Reward

\$100

Platform Share

\$10

Unqualified Referrals

\$15

Platform Total

\$25

35. PLATFORM WALLET DISTRIBUTION

Instead of sending platform profit to a single treasury wallet and manually distributing it, the platform can use a dedicated **Platform Profit Distribution Smart Contract**.

The smart contract automatically receives the platform's profit allocation and distributes it among all registered Platform Partner Wallets according to predefined rules.

Example

Platform Allocation

\$25

Wallet Count

5

Each Wallet Receives

\$5

36. REWARD POOL SYSTEM OVERVIEW

The platform maintains four lifetime reward pools.

These pools are funded by:

Profit Wallet Withdrawal Charges

Only.

Purpose:

Reward long-term traders and community builders.

37. REWARD POOL FUNDING SOURCE

Whenever a user withdraws from Profit Wallet:

10% Withdrawal Charge

is collected.

This charge funds the reward ecosystem.

Example

Profit Wallet Withdrawal

\$1,000

Charge

\$100

User Receives

\$900

38. REWARD POOL DISTRIBUTION

The collected charge is divided among four reward pools.

Pool Allocation

Pool 1 40%

Pool 2 30%

Pool 3 20%

Pool 4 10%

Example

Collected Charge

\$100

Pool 1

\$40

Pool 2

\$30

Pool 3

\$20

Pool 4

\$10

39. REWARD POOL QUALIFICATION FORMULA

Qualification is based on:

Self-Trading Volume + Direct Referral Trading Volume

Formula

Qualified Volume

=

Self-Volume + Direct Referral Volume

40. POOL 1 QUALIFICATION

Required Total Volume

\$5,000

Benefit

User becomes eligible for Pool 1 distributions.

41. POOL 2 QUALIFICATION

Required Total Volume

\$25,000

Benefit

User becomes eligible for Pool 2 distributions.

42. POOL 3 QUALIFICATION

Required Total Volume

\$50,000

Benefit

User becomes eligible for Pool 3 distributions.

43. POOL 4 QUALIFICATION

Required Total Volume

\$100,000

Benefit

User becomes eligible for Pool 4 distributions.

44. LIFETIME QUALIFICATION RULE

Qualification is permanent.

Once achieved:

Never expires

Never downgrades

Never resets

Example

User Qualifies:

Pool 1

Pool 2

Pool 3

The user remains active in all three pools forever.

45. MULTIPLE POOL BENEFITS

Users can receive rewards from multiple pools simultaneously.

Example

Qualified:

Pool 1

Pool 2

Pool 3

Pool 4

User receives distributions from all four pools.

46. REWARD POOL BALANCE ACCUMULATION RULE

One of the most important principles of the platform is that Reward Pool funds never expire.

Reward Pool balances must always remain inside their respective pools until distributed to qualified users.

The platform is not permitted to:

- Remove pool balances
- Burn pool balances
- Transfer pool balances elsewhere
- Reallocate pool balances to another pool

unless explicitly approved through a future governance mechanism.

Example

Pool 1 receives:

\$100

Current Qualified Users:

0

Result:

No distribution occurs.

No reward mapping occurs.

Pool 1 Balance remains:

\$100

The balance remains stored indefinitely.

47. FIRST QUALIFIED USER RULE

When a pool contains accumulated funds and no qualified users existed previously, the first qualified user receives the entire accumulated balance.

This prevents funds from becoming permanently locked.

Example

Pool 1 Balance:

\$5,000

Qualified Users:

0

A user qualifies for Pool 1.

Result:

Entire \$5,000 is mapped to that user.

Pool Balance becomes:

\$0

The user may claim the full amount.

48. FUTURE DISTRIBUTION RULE

Once at least one qualified user exists, future distributions are shared equally among all currently qualified users.

Example

Pool 1 Qualified Users

User A

User B

User C

New Pool Allocation

\$90

Distribution:

User A = \$30

User B = \$30

User C = \$30

49. REWARD MAPPING ENGINE

Reward Pools do not directly credit wallets.

Instead, every distribution creates a Reward Mapping Record.

Reward Mapping ensures:

- Auditability
- Transparency
- Claim tracking
- Historical reporting

50. REWARD MAPPING RECORD

The system creates a record containing:

Mapping ID

User ID

Pool ID

Reward Amount

Source Withdrawal ID

Distribution Date

Claim Status

Claim Timestamp

Example

Mapping ID:

RPM-000001

Pool:

Pool 1

Amount:

\$25

Status:

Unclaimed

51. CLAIMABLE REWARD BALANCE

Users may accumulate multiple reward mappings.

The system calculates:

Total Claimable Balance

=

Sum of all Unclaimed Reward Mappings

Example

Mapping 1

\$10

Mapping 2

\$25

Mapping 3

\$15

Claimable Balance

\$50

52. REWARD CLAIM SYSTEM

Users can claim reward mappings at any time.

The claim process is user initiated.

No automatic wallet credit occurs.

53. CLAIM PROCESS

Step 1

User opens Reward Pool Dashboard

Step 2

System displays claimable balance

Step 3

User clicks Claim

Step 4

System validates mappings

Step 5

Mappings marked Claimed

Step 6

Funds transferred

Step 7

Audit record generated

54. CLAIM DESTINATION

Approved Final Rule

Reward Pool claims are transferred directly to the user's connected non-custodial wallet.

They do NOT pass through:

Deposit Wallet

Profit Wallet

This ensures maximum decentralization.

Example

Claim Amount

\$100

Connected Wallet

0xABCD1234

Result

Smart Contract transfers:

\$100 USDT

Directly to wallet

55. CLAIM FEES

Reward Pool Claims are completely free.

No deductions apply.

No Charges

No Admin Fee

No Withdrawal Fee

No Processing Fee

No Platform Fee

Example

Claim

\$100

User Receives

\$100

56. REWARD POOL PRINCIPLES

The reward system follows the following principles:

1. Funds never expire.
 2. Funds never burn.
 3. Funds never leave the assigned pool.
 4. First qualified user receives accumulated balance.
 5. Future allocations are equally distributed.
 6. Claims are free.
 7. Claims are fully auditable.
 8. Users may qualify for multiple pools.
-

57. DEPOSIT SYSTEM

The platform accepts:

USDT (BEP20)

only.

No fiat support.

No credit card support.

No banking support.

58. DEPOSIT FLOW

User

Connect Wallet

Transfer USDT

Blockchain Confirmation

Deposit Wallet Credit

Trade Ready

59. DEPOSIT VALIDATION

System validates:

Correct Network

Correct Contract

Minimum Confirmations

Successful Transfer

Only then:

Deposit Wallet balance is updated.

60. WITHDRAWAL SYSTEM

Two withdrawal types exist.

Deposit Wallet Withdrawal

Source:

Deposit Wallet

Fee:

0%

Destination:

Connected Wallet

Profit Wallet Withdrawal

Source:

Profit Wallet

Fee:

10%

Destination:

Connected Wallet

61. PROFIT WALLET WITHDRAWAL EXAMPLE

Withdrawal Request

\$1,000

Charge

\$100

User Receives

\$900

Reward Pool Funding

Pool 1 = \$40

Pool 2 = \$30

Pool 3 = \$20

Pool 4 = \$10

62. USER DASHBOARD

The dashboard is the primary screen of the Telegram Mini App.

Users should immediately understand:

Wallet balances

Trading activity

Referral status

Reward status

63. DASHBOARD OVERVIEW SECTION

Display:

Deposit Wallet Balance

Profit Wallet Balance

Total Trading Volume

Total Deposits

Total Withdrawals

Total Rewards Earned

Total Referral Earnings

Total Reward Pool Earnings

64. QUALIFICATION STATUS SECTION

Display:

Pool 1 Status

Pool 2 Status

Pool 3 Status

Pool 4 Status

Required Volume

Current Volume

Qualification Date

Example

Pool 1

Qualified

\$6,200 / \$5,000

Pool 2

Not Qualified

\$18,000 / \$25,000

65. ACTIVE POOLS SCREEN

Display all active pools.

Information:

Level Qualification

72. LEVEL WISE REFERRAL VIEW

For each level:

Level Number

User Count

Trading Volume

Commission Earned

Qualification Status

Example

Level 1

25 Users

\$15,000 Volume

\$350 Earnings

Qualified

73. WALLET LEDGER

Every transaction must be visible.

Display:

Date

Time

Transaction Type

Credit

Debit

Balance

Narration

Reference Number

Example

2026-06-16

Trade Reward

Credit

\$70

Pool #P1234

74. AUDIT PRINCIPLE

Every financial event must be traceable.

Nothing can occur without a ledger record.

75. SYSTEM ARCHITECTURE OVERVIEW

The platform is designed as a Telegram-native decentralized prediction ecosystem.

The architecture consists of three major layers:

Layer 1 – Telegram Mini App

User Interface Layer

Responsible for:

- User Registration
 - Wallet Connection
 - Pool Participation
 - Trading Activities
 - Referral Management
 - Reward Pool Management
 - Transaction History
-

Layer 2 – Backend Services

Business Logic Layer

Responsible for:

- User Authentication
 - Telegram Mapping
 - Pool Management
 - Settlement Calculations
 - Referral Qualification Calculation
 - Reward Pool Qualification Calculation
 - Dashboard Data Processing
 - Reporting
 - Audit Logging
-

Layer 3 – Smart Contract Layer

Blockchain Settlement Layer

Responsible for:

- Fund Custody
- Deposit Verification
- Settlement Execution
- Reward Distribution
- Reward Claim Processing
- Withdrawal Execution
- On-chain Auditability

76. DECENTRALIZATION MODEL

The project aims for maximum decentralization.

Version 1 Architecture:

Telegram Mini App

-

Backend Services

-

Smart Contracts

This hybrid model provides:

- Better user experience
- Faster calculations
- Lower gas consumption
- Complete financial transparency

77. USER IDENTITY MODEL

Each user must have a unique identity record.

User Profile contains:

Telegram ID

Telegram Username

Wallet Address

Referral Sponsor ID

Registration Date

Account Status

Qualification Status

78. MANDATORY REFERRAL MODEL

The platform uses a forced referral architecture.

Users cannot self-register.

Users must join through:

Referral Link

or

Referral Contract Address for first user only

Registration Process

Referral Link Click

↓

Telegram Authorization

↓

Wallet Connection

↓

User Creation

Referral Tree Assignment

Dashboard Access

79. REFERRAL TREE PRINCIPLE

Referral genealogy becomes permanent.

Users cannot:

- Change Sponsor
- Transfer Position
- Reassign Referral Tree

after registration.

80. SMART CONTRACT MODULES

The platform requires separate smart contracts.

User Registry Contract

Stores:

User ID

Wallet Address

Telegram Mapping

Referral Structure

Pool Contract

Stores:

Pool Information

Participant Information

Pool Status

Pool Volumes

Settlement Contract

Stores:

Winner Calculation

Reward Distribution

Capital Return

Settlement Records

Referral Contract

Stores:

Referral Tree

Qualification Data

Commission Records

Reward Pool Contract

Stores:

Pool Balances

Reward Mappings

Claim Records

Qualification Records

Treasury Contract

Stores:

Platform Allocation

Platform Wallet Distribution

Treasury Records

81. SMART CONTRACT EVENTS

Every important action generates blockchain events.

Examples:

UserRegistered

PoolCreated

TradePlaced

PoolLocked

PoolSettled

RewardDistributed

ReferralPaid

RewardClaimed

WithdrawalExecuted

82. DATABASE DESIGN

Although funds remain blockchain verified, off-chain indexing is required.

The platform maintains a relational database.

83. USERS TABLE

Stores:

UserID

TelegramID

WalletAddress

SponsorID

RegistrationDate

Status

84. WALLET TABLE

Stores:

WalletID

UserID

DepositWalletBalance

ProfitWalletBalance

UpdatedDate

85. TRADE POOL TABLE

Stores:

Status

Date

92. AUDIT LOG TABLE

Stores:

LogID

ActionType

ReferenceID

UserID

DateTime

Description

93. ADMIN PANEL OVERVIEW

The Admin Panel manages ecosystem operations.

No admin can manually modify balances.

All financial actions must be rule driven.

94. ADMIN DASHBOARD

Displays:

Total Users

Active Users

Today's Volume

Total Deposits

Total Withdrawals

Platform Revenue

Total Referral Distribution

Reward Pool Balances

95. USER MANAGEMENT

Admin can:

View Users

Suspend Users

Freeze Accounts

View Trading History

View Wallet History

View Referral Tree

96. POOL MANAGEMENT

Admin can:

View Pools

View Pool Status

Monitor Volumes

Monitor Settlements

Create Emergency Lock

Admin cannot manually alter results.

97. REWARD POOL MANAGEMENT

Admin can view:

Pool Balances

Qualified Users

Reward Mapping Records

Claim Records

Distribution Records

98. REPORTING MODULE

Reports:

Daily Volume

Weekly Volume

Monthly Volume

Referral Growth

Reward Pool Growth

Revenue Analysis

99. SECURITY FRAMEWORK

The platform must implement:

Wallet Verification

Contract Verification

API Authentication

Encrypted Communication

Audit Logging

Rate Limiting

Fraud Detection

100. MULTI-ACCOUNT PROTECTION

The platform should monitor:

Duplicate Wallets

Duplicate Telegram Accounts

Referral Abuse

Wash Trading

Circular Volume Generation

Suspicious accounts may be flagged.

101. SETTLEMENT SECURITY

Settlement Process must be:

Automatic

Immutable

Auditable

Verifiable

No manual settlement intervention should be possible.

102. FAILED TRANSACTION HANDLING

If blockchain transfer fails:

Status = Pending

Retry Queue = Created

User Balance = Unchanged

Audit Log = Generated

103. FAILED WITHDRAWAL HANDLING

If withdrawal transaction fails:

Funds remain reserved.

Transaction enters retry mode.

No duplicate withdrawal is allowed.

104. NO WINNER EDGE CASE

In theory impossible because every candle is either:

Green

or

Red

One side always wins.

105. EMPTY POOL EDGE CASE

If one side contains zero participants:

Pool remains valid.

The platform follows configured settlement rules.

Recommended Rule:

Pool cancelled and stakes returned.

106. ORPHAN REFERRAL EDGE CASE

If referral chain ends before Level 20:

Remaining levels treated as unqualified.

Corresponding commissions move to Platform Profit Wallet.

107. REWARD POOL EDGE CASE

If no qualified users exist:

Funds remain accumulated.

No distribution occurs.

No mapping occurs.

108. FIRST QUALIFIED USER EDGE CASE

When first user qualifies:

Entire accumulated balance becomes claimable.

No platform retention occurs.

109. RULE ENGINE SUMMARY

The Rule Engine governs:

Pool Rules

Trade Rules

Qualification Rules

Referral Rules

Reward Pool Rules

Withdrawal Rules

Settlement Rules

Audit Rules

110. CORE BUSINESS RULES

Rule 1

Every user must join through a referral link.

Rule 2

Every user must connect a wallet.

Rule 3

BTCUSD Spot is the only supported asset.

Rule 4

Users predict Red or Green only.

Rule 5

Trade Amount:

Minimum = \$1

Maximum = \$1,000

Rule 6

Winning Reward Distribution:

User = 70%

Referral = 20%

Platform = 10%

Rule 7

Referral Structure:

20 Levels

1% Per Level

Rule 8

Referral Qualification:

Self Volume + Direct Referral Volume

Required Volume = Level $\times$ \$100

Rule 9

Reward Pool Qualification:

Pool 1 = \$5,000

Pool 2 = \$25,000

Pool 3 = \$50,000

Pool 4 = \$100,000

Qualification Formula:

Self Volume + Direct Referral Volume

Rule 10

Reward Pool Qualification is lifetime.

Rule 11

Profit Wallet Withdrawal Charge:

10%

Rule 12

Reward Pool Funding:

Pool 1 = 40%

Pool 2 = 30%

Pool 3 = 20%

Pool 4 = 10%

Rule 13

Reward Claims are free.

Rule 14

Reward Claims transfer directly to connected wallet.

Rule 15

All transactions must be auditable.

111. PROJECT CONCLUSION

The BTC Binary Prediction Trading Platform is a decentralized Telegram-native prediction ecosystem combining:

- Bitcoin Prediction Markets
- Multi-Wallet Trading

- 20-Level Referral Rewards
- Lifetime Reward Pools
- Transparent Settlement
- Smart Contract Distribution
- Full Auditability

The platform is designed to create a self-sustaining community-driven ecosystem where trading activity, referral growth, and reward distribution operate under transparent and predefined business rules.
